PROFILE

I am principally a JavaScript Web Developer with 5 years of experience and a Data Scientist using python with 3 years of experience, I worked with many other technologies like Java, C++, and PHP.

For web development, I am a back-end and front-end programmer using NodeJs and ReactJs having the knowledge to choose the best conception of the database [relational or no relational].

Speaking about Artificial intelligence, I have a good level in Deep learning, Nlp, Machine learning, problem resolution, problem optimization, and data mining. I can do data collection and data cleaning, and then build models that help you taking the right decision.

I have worked in many companies which allows me to get strong expertise in team-working, social intelligence, problem resolution, how to discuss the functionalities with the customer, reporting, and choosing the best technologies in order to get the best results possible.

My latest job is as a full stack web developer in Sonelgaz company, it's an international Algerian company that is responsible for sharing the electricity and the gas in all the country, that gave me a good experience in graphs and how to treat complicated problems with high complexity.

EMPLOYMENT HISTORY

❖ **Full stack web developer, Dz-Canada [Remote - CD]** Jul 2018 — Dec 2018
Québec

- Creation of dynamic web application using PHP, MySQL,
- Customizing HTML, CSS, BOOTSTRAP AND REACT templates depending the the need of the client.
- Building E-commerce websites using OpenCART.

❖ **Full Stack Javascript Developer, LAKKINI [CD]** Apr 2021 — Nov 2022
Algeria

- I used to create Restful API using Nodejs, MongoDB on the server-side.
- On the client-side using REACT, HTML, CSS.

❖ **Microservices with Golang & React developer, Emplorium [Remote - CD]** Jun 2022 — Dec 2022
London

- I used to create GraphQL API using Golang, Postgres.
- On the client-side, working with React.
- Handling microservices architecture and how to define multiple services.

❖ **Javascript Web developer, Elit Sonelgaz [CI]** Dec 2021 — Present
Algiers

- Handling graphs and high complexity networks.
- Real problem resolution and optimization.

- Back-end using NodeJs and python.
- Front-end using ReactJs.

❖ Deep Learning and Machine Learning developer, Freelance tasks Apr 2020 — Present

I used to take projects in AI using machine learning and deep learning tools.

- Data collection using web scraping from websites.
- Cleaning data and preparing it for machine learning.
- Creating smart models with TensorFlow, Sklearn, Pandas, and Keras Libraries with Python.

EDUCATION

❖ University of Science and Technology Houari Boumediene Sep 2018 — Jun 2020

Master 2 in Artificial Intelligence

Algiers

I have got huge expertise in Artificial intelligence from my university in different domains, including data mining, vision computer, NLP, problem resolution, algorithm optimization, and complexity.

❖ University of algiers Sep 2015 — Jun 2018

Licence in computer systems

Algiers

I have learned many things related to web development and database structure, including MySQL database, UML for conception, How to choose the best architecture for database related to the problem, web application, understanding very well how processors and pcs work which allows me to know what data structure to choose in my programs and algorithm.

SKILLS

PHP	HTML & CSS
CSS	Node.js
HTML5	Conflict Resolution
SQL	React
jQuery	JavaScript
MySQL	Typescript
MongoDB	AJAX
Git	Postgres
Python	Tensorflow, Keras, Pandas and SKlearn
Java	Golang

LANGUAGES

English	<i>Highly proficient</i>	Arabic	<i>Native speaker</i>
French	<i>Highly proficient</i>		

INTERNSHIPS

❖ Deep Learning Researcher, RESEARCH CENTRE FOR SCIENTIFIC AND TECHNICAL INFORMATION Jan 2020 — Jun 2020

Algiers

I have built multiple deep learning and machine learning models in the project "Sentiment Analysis Algerian Dialect". I went through different steps, let me resume them for you.

- Data Collection from Facebook

- Having done deep research of related works then I have invented my own solution by contributing to the subject of 'Sentiment Analysis Arabic Dialect'
- Data cleaning
- Implementing common models of deep learning and machine learning then proposing my own model by combining different models, then comparing different architecture

❖ Resolution of communication problem between two applications using Jan 2018 — Jun 2018 Web Service, General Directorate of Douane Algiers

I have created a web service that automatically allows data exchange between two websites using Java, MySQL, and Bootstrap.

❖ Participation in Chatbot system, Emplorium Aug 2021 — Dec 2021

I have participated in a chatbot website that allows communication with customers.

- Creation of multiples agents accounts.
- A customer can ask any question in the chat.
- Each agent can answer customers' questions. So agents between them work at the same time without any problem.

❖ Participation in School management system, Lakkini

1- Communication with the School director to get functionalities.

2- Restful API on the server side using NodeJs and MongoDB.

3- JavaScript Framework on the client site [Ajax, Query]

COURSES

❖ ReactJs

Zero to Hero Academy

❖ Deep Learnin in NLP

Coursera

❖ Machine Learning

Coursera

❖ English

Royal School

❖ Senior Web Developer

Zero to Hero Academy

❖ Natural Language Processing
